

About WestTel

WestTel Limited (<http://www.westtel.ky/>) is a provider of advanced telecommunications and professional services to the Cayman Islands and is an independent affiliate of Cayman's cable television company WestStar TV Ltd., in partnership with Key Tech Limited from Bermuda. A young and dynamic company, WestTel was established in 2003 when WestStar was granted licenses by the Information Communications Technology Authority (ICTA) to deliver Internet and telephone services to the Cayman Islands.

WestTel delivers its Internet services utilizing the latest in communications technology, providing various Internet and voice services via a robust network of fixed wireless, mobile wireless and cable infrastructures. The company's dedicated Internet and managed data services are proven, reliable, resilient and utilize enhanced security protocols. Products include integrated business-to-business data services delivered under the brand name WestTel Business Connect and residential high-speed Internet.

WestTel has grown swiftly and has built a solid customer base of both business and residential customers. The company's goal is to continually provide improved service, quality, value and choice to the people of the Cayman Islands.

Our Network

WestTel is an IP services provider and a leader in the emerging local telephony and broadband market. We built our network from the ground up in order to provide customers an integrated local and long distance telephone and broadband Internet package over an IP-based architecture. These advanced technologies provide a platform for the delivery of future IP-based applications, such as unified messaging and a variety of hosted business applications.

Our private IP network and softswitch technology allows us to provide our customers with affordable, high-quality, communications services. Our Corporate platform employs advanced security features including encryption to the AES OCB standard (Advanced Encryption Standard Offset Codebook Mode)

Unlike many VoIP companies, who use the public Internet to transport voice calls and are therefore dependent on their broadband Internet connection, voice calls with WestTel travel over a dedicated IP connection bypassing the public Internet. This allows WestTel to manage the high-quality of our service and achieve far above industry standards.

Our Shareholders

KeyTech Limited (<http://www.keytech.bm/>) is a diversified telecommunications holding company focused largely on the Bermuda market. KeyTech was incorporated in Bermuda on 28th October, 1998 and subsequently acquired all the shares of The Bermuda Telephone Company Limited ("BTC") in 1999. BTC is now a wholly-owned subsidiary of KeyTech with revenues derived primarily from its Bermuda-based operations. Since then KeyTech has added three subsidiary telecommunications businesses and three affiliates to its portfolio. WestTel is a 70% owned subsidiary company.

WestStar TV Limited Limited (<http://www.weststartv.com/>) of Grand Cayman was established in 1993. Today, WestStar's wireless cable television service reaches 85% of the Caymanian market. WestStar offers a rich selection of the most popular cable programming, both US and international. This, along with clear, uninterrupted television signal makes WestStar Cayman's number one choice for news, sports and entertainment. WestStar has a 30% ownership share of WestTel.
